Profile Summary

Full-Stack Software Engineer building production-grade AI applications and scalable backend systems using Node.js, FastAPI, React, Python, MongoDB, PostgreSQL, and Redis. Experienced in designing REST APIs, real-time AI services, cloud deployments, and performance optimization.

Technical Skills

Languages: JavaScript, TypeScript, Python

Frontend: React, Redux, HTML5, CSS3

Backend: Node.js, Express.js, FastAPI, REST APIs, JWT, OAuth 2.0

Databases & Caching: PostgreSQL (Prisma), SQL, MongoDB (Mongoose, Beanie), Redis, FAISS (Vector DB)

AI: LangChain, LangGraph, LangSmith (LLM observability), OpenAI API, Gemini API, RAG, Prompt Engineering

Tools & DevOps: AWS (S3), GCP, Docker, Git, GitHub Actions, Linux, Bash/Shell, Celery

Core Fundamentals: Data Structures & Algorithms, Object-Oriented Programming (OOP), System Design

Professional Experience

Full Stack Engineer

Dec 2025 – Present

Careerboat

- Cut LLM token consumption by 40% on the AI interview service by architecting stateful Node.js APIs with MongoDB checkpointing and dynamic context summarization across multi-turn sessions.
- Reduced time-to-first-audio to ~2s by engineering a real-time streaming layer over Server-Sent Events, AWS S3, and a TTS pipeline that delivered token-by-token responses to the client.
- Optimized a high-volume job search API by redesigning MySQL FULLTEXT queries, database filtering, and ranking algorithms, reducing response time from 1–5 minutes to 5–10 seconds while improving search relevance and query efficiency.
- Enabled secure online payments by integrating the Razorpay gateway end-to-end, implementing custom backend logic for transaction handling and discount-coupon validation.

Projects

InsightFlow | insightflow.surajpatel.dev | github.com/SurajPatel04/ai-multimedia-rag-app

May 2026

- Engineered a full-stack multimodal RAG platform (FastAPI, LangGraph, React, MongoDB, FAISS, Redis, SSE) enabling Q&A over documents (PDF, Word, Excel, CSV) and media (audio, video) with inline source citations.
- Designed a two-phase ingestion flow that promotes uploads only after confirmation and cleans up the rest, eliminating wasted embedding spend on unconfirmed files.
- Integrated Deepgram for timestamped transcription with clickable media citations, enabling precise retrieval and playback to the exact second.
- Implemented Redis semantic caching for repeated queries, LangGraph-based conversation memory management, and GCP deployment using Docker and GitHub Actions CI/CD.

AI Interview | interview.surajpatel.dev | github.com/SurajPatel04/AI-Interview

May 2025 – Aug 2025

- Engineered a full-stack AI-powered interview system using React, Node.js, and MongoDB, generating context-aware questions from resumes, skills, and user responses using LangChain and Gemini.
- Engineered a real-time interview system with WebRTC and Socket.io, integrating streaming audio and TTS, reducing next-question API response latency from ~8-10s to ~3-6s using Redis caching.

Education

Master of Computer Applications (MCA)

Amity University Online

July 2024 – June 2026

Noida, India

Bachelor of Science

Lucknow Christian College

July 2021 – June 2024

Lucknow, India
